

The City has a policy of providing limited street lighting throughout the City. Ownership of street lights is mixed between City and Power Company. The City funds all street light electricity and maintenance costs. These costs range from \$10 to \$25 per month, per light.

Street lights are provided to aide drivers in negotiating the roads during nighttime driving. On major routes, like West Broadway (Highway 6), full roadway lighting is provided yielding a completely lit roadway. On local streets, like those in your neighborhood, street lights are provided only at a select limited number of locations. These locations are determined by the following City policy:

In general street lights will be installed on residential streets at intersections

Street lighting for private roads is the responsibility of the owners.

Many times, a request for additional street lights will be made to increase security in a neighborhood. The City street lighting location policy provides street lights only to aide in night driving. Specific security concerns should be discussed with the Police Department. Security lighting may be obtained for private use through the Power Company at the resident's or neighborhood's expense.

Most existing street lights have been installed on either wood or metal poles. This results in a simple method to determine who to call should there be a street light malfunction or outage.

Street lights on **wood poles** are maintained by the power company. Problems should be reported to MidAmerican Energy at: 1-800-595-5325.

Street lights on **metal poles along city streets, traffic signals, bridges and overpasses** are maintained by the City of Council Bluffs. Problems should report to: 328-4645.

Street lights on **metal poles along arterials** are maintained by MidAmerican Energy . Problems should be reported to: 1-800-595-5325.

Street lights on **metal poles along highways and interstates** are maintained by the Iowa Department of Transportation and should reported to: 323-6125
